

AMPM Counterfeit Products Avoidance Policy

Aircraft Missile Parts Manufacturing (AMPM) is a division of Alvord-Polk Inc. AMPM and the other corporate divisions of Alvord-Polk Inc. are certified to a comprehensive quality management system Standard ISO9001:2008 accredited by NSF International Strategic Registrations # 84311-IS2.

AMPM understands the growing concern over the increased volume of fraudulent/counterfeit materials and parts entering the aerospace supply chain. If undetected, the suspect components could lead to reduced part performance and reliability. AMPM has always viewed non-traceable materials, or surplus parts as inherently suspect and reviewed accordingly.

AMPM therefore pledges the following:

1. Materials will be procured directly from original manufacturers or their authorized distributors and will be accompanied by the appropriate certifications.
2. No less than once a year, procured material samples will be sent out to an independent testing agency to verify the composition and certifications.
3. Factory new parts will be procured directly from original manufacturers or their authorized dealers.
4. AMPM maintains a register of approved suppliers, including the scope and criteria for their approval. AMPM does not procure product from suppliers outside the United States.
5. Visual Inspection, measurement, manufacturer markings, verification of date codes and lot numbers, and non-destructive evaluation will be used based upon risk assessment.
6. Discovery of counterfeit parts will be immediately reported to GIDEP and all pertinent governing bodies.
